

New Laser Removal Treatment Offered at Phoenix Salon

Written by Kirstina Bolton

Thanks to the innovative treatment of Delete in Phoenix, you have the option to rid yourself of that regretful moment in only one session.

In the early 1990s, actors Johnny Depp and Winona Ryder took the pop culture limelight by storm with their heated romance that eventually fizzled out after three years. Of course, it wasn't before Depp took his heart-on-his sleeve mentality and inked "Winona Forever" into his arm. Luckily for him, he changed "Winona" to "Wino," possibly a declaration for the French red wine he grew to love.

Depp, along with other stars like Angelina Jolie and Megan Fox, have all gone under the laser for tattoo removal. An Uptown Phoenix Salon will expand its doors in July for a safe, expedited, patented 4-n-1 Laser Tattoo Removal Treatment that eliminates unwanted tattoos in as little as one session. The salon uses traditional tattoo removal and will start utilizing the 4-n-1 Laser Tattoo Removal Treatment.

Delete - Tattoo Removal & Laser Salon features the new treatment where complete tattoo removal can be achieved—for some, in just one visit—something that is not only revolutionary to the Valley, but to laser technology and tattoo removal communities as a whole.

Unlike other removal treatments, Delete uses its Candela laser –"AlexELTE" which virtually eliminates the risk of scarring that other lasers present.

Delete - Tattoo Removal & Laser Salon's 4-n-1 Laser Tattoo Removal treatment would cut the removal process down to a fraction of the time conventional removal has traditionally taken. Its success would indicate a significant advancement from standard removal procedures, which can sometimes take up to 20 sessions, spread across multiple months to achieve acceptable tattoo lightening.

So instead of waiting for that ex-lovers name to be rid of your body over the course of a year, you can have it out of your skin in one session. www.deleteitnow.com.
