The Frank Lloyd Wright Foundation inaugurated a new 250-kilowatt AC solar photovoltaic power system donated by First Solar, Inc., which will help power the historic Taliesin West campus.

The commissioning marks the successful completion of the first phase of the *Energizing Taliesin West*™ initiative, a pioneering effort to transform the entire National Historic Landmark Taliesin West site into a “net zero” energy customer, producing as much energy as it consumes annually, while maintaining the historic and architectural integrity of the site. Let's just say they're giving a whole new meaning to being eco-friendly. www.franklloydwright.org
